TO
Her royal highness:
Crown Princess of Sweden, Duchess of Västergötland

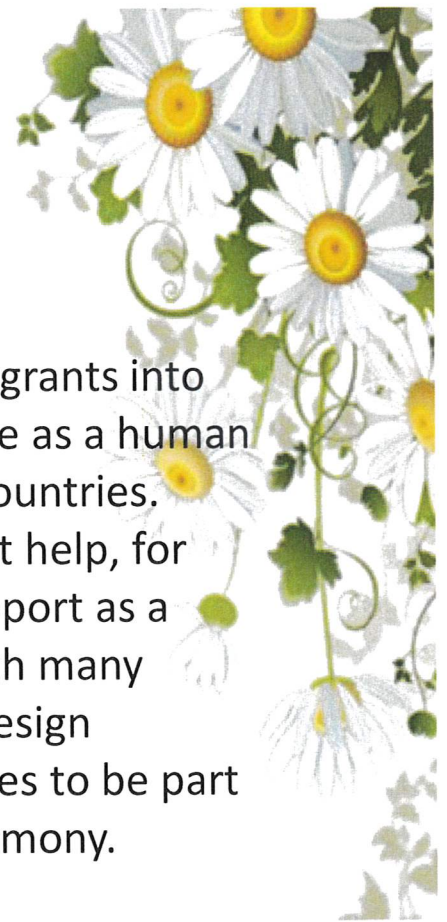

I am Hülya "Hissu" Kytö, it is a pleasure to have the opportunity to present to your highness our idea.

I do represent the Finland's first association for women with immigrant backgrounds: **DaisyLadies Ry**. Our foundation is leading a project named **Nordic Ladies**, in alliance with Kvinnofrigörelse i Förorten, RIFFI National Federation of Immigrant Women Associations from Sweden and with AWA, Afghan Women's Association from Denmark.

NORDIC LADIES – FORWARD TOGETHER, as we call our project, has the purpose to share experiences, knowledge and ideas to fight against women's violence.

We are a small organization with committed and professional workers, more than 20 years of experience, clear ideas and big hopes to make changes in our society, by empowering women to act themselves as motors of a different reality. We think that making clever mothers who raise today's kids as great people of the future is a solution for many problems that we are facing right now.

Nordic Ladies intent to convert unoccupied Immigrants into strong women with conscience of their own value as a human been, grateful and productive with the hosting countries. To be able to succeed in our goal we need a great help, for that, we kindly request from her majesty her support as a "Godmother" using your name we will go through many doors, opening a big number of possibilities to design protocols that can help women in Nordic countries to be part of integrated societies for living in peace and harmony.

We have a good experience with this kind of Godmothering figure as we count with the support of Sirpa Pietikainen European Parliamentary. with her we are also working in projects in the same field. Therefore, we believe your support will guaranty bigger and extensive results of clever management.

We look forward having your kind answer, in the hope to have the pleasure counting with her highness invaluable support.

Yours faithfully

Hülya "Hissu" Kytö
Executive Director
